Flat rates for shipment: Free delivery: We deliver free of charge to places in Germany and Austria for orders totalling 300 euros and more.

Parcel: For orders totalling up to 300 euros, we charge a lump sum of – **€ 6.25 for parcels to places in Germany or – € 9.90 for parcels to places in Austria.** Additional after partial delivery is free of charge. Request conditions of delivery to other E.U. countries and for international delivery.

Transporter: Owing to the nature of their packaging, their weight or being hazardous goods, some of the products we offer require cost-aware delivery by a hauling transporter, even in small quantities. This holds, among others, for dip products as well as disinfectants and detergents when ordered by the larger container. The substantially higher haulage cost this entails will be charged by us at a lump € 25.00 for orders not reaching the free-of-charge threshold of 300 euros. Of course, this lump-sum fee will be a one-time cost for orders of one or several products, which is why we recommend optimising the order to the point where it is in excess of the free-of-charge threshold.

Limitations: Products to which Germany's Regulation on Prohibited Chemicals (ChemVerbotsV) is applicable shall be delivered by forwarding to resellers only. The appropriate information is given at the description herein of the products concerned.

Concentrates for spilling and spreading

stops the fly population even before it starts

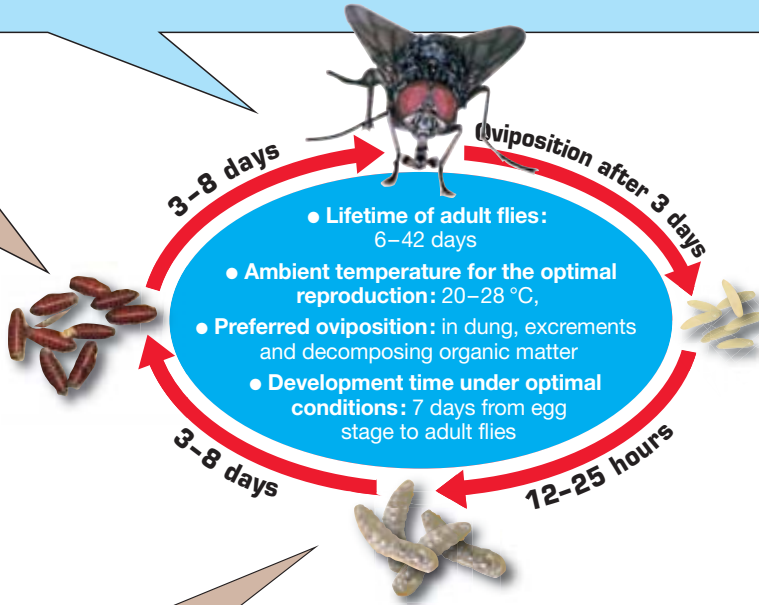

Reproduction

As soon as 3 days after hatching, flies mate, and immediately after that females are ready to lay eggs for the first time. If conditions are good, the development of an egg into an adult fly may take no longer than 7 days. Where ambient conditions are favourable, such as in stables, up to 15 fly generations per year may be seen.

Pupal stage

This starts the genetic metamorphosis of the larvae. The skin hardens to form the puparium around the pupa. Once the development is complete, the adult fly will leave the capsule through an opening forced in at the head.

Oviposition

A female fly lays about 2000 eggs in her life. It lays about 150 and 400 eggs per oviposition in an interval of 3-4 days. Preferred oviposition places are dung, excrements and decomposing organic materials.

Larval stage

To mature to hatching, the larvae need 12 - 25 hours from the moment the eggs were laid. The maggots, with no discernible head nor legs, move somewhat awkwardly by twisting and writhing their body, grow to up to 12 mm, and feed on the organic matter (substrate) they hatched on.

Only 15% of the fly population are adult flies

Fly control concentrate for spray and paint application

LD 100 is a liquid fly control concentrate based on pyrethroids.

Through a targeted application by painting or spraying, on spots preferred by flies, the product will show a long-term effect of up to 4 weeks in cattle, pig, and laying-hen housings. By alternating the active ingredients a resistance development can be avoided.

LD 100 (500 ml) = 5 litres ready to use solution = sufficient for footprints up to 350 m²

The active ingredients are listed under each product

Fly control concentrate with attractant

LD 100 I is a powdered fly control concentrate based on Imidacloprid. Its effect is immediate on all flying insects, especially stable flies in cow, cattle, pig, and laying-hen houses. Due to special ingredients the product shows a long-term effect of up to 4 weeks.

- Immediate effect
- No resistance development noticed
- Transparent, does not leave stains
- Odourless

LD 100 I (500 g) = 4 litres ready to use solution = sufficient for footprints up to 200 m²

Imidacloprid, Tricosene

Fly control concentrate for spray and paint application

LD 100 A is a powdered fly control concentrate based on Azamethiphos. Through a targeted application by painting or spraying, on spots preferred by flies, the product will show a long-term effect of up to 4 weeks in cattle, pig, and laying-hen housings.

- Immediate effect after ingestion
 - No resistances known
 - Long-term effect
- Alternating our LD 100 products with the different active ingredients will avoid resistance development.

LD 100 A (250 g) = 2 litres ready to use solution = sufficient for footprints up to 150 m²

Pour-on and spreading product to control fly larvae

Fly tomb 4GR is an excellent, powerful pour-on and spreading product to treat flies' breeding areas, such as dung heaps and deep bedding for the calf pens. Fly tomb 4GR is active against fly larvae and rat-tail larvae, inhibiting fly development right when it begins. As a result, fly populations decrease substantially within 10 to 20 days from the first treatment.

Fly tomb 4GR (500 g) =
 50 liters ready-to-use solution = sufficient for up to 100 m²
 Fly tomb 4GR (3 kg) =
 300 liters ready-to-use solution = sufficient for up to 600 m²

Maggot control granulate for pour and spread application

Cyracid 2.0 is a highly effective granulate for larvae control that interrupts the development cycle of maggots. This larvicide has no effect on adult flies but it works immediately against maggots and rat-tail larvae in cow-, cattle-, pig-stables and poultry houses. It can be applied by pouring or spreading onto fly breeding areas such as manure, slurry, deep litter etc. After 10 to 20 days after the first application the fly population significantly decreases.

Cyracid 2.0 (1000 g) = 30 liters ready-to-use solution = sufficient for up to 40 m²

Cyracid 2.0 (5 kg) = 150 liters ready-to-use solution = sufficient for up to 200 m²

Insecticide to control harmful crawling vermin in warehouses

Crawl eX is a liquid insecticide, concentrate, that works almost immediately against crawling insects such as wheat weevil, flour beetle, drugstore beetle, lesser mealworm and other hygienically insecure vermin. Crawl eX is suitable for spray application in empty warehouses, hangars and silos.

- Rapid knock-down effect
- Long-term effect of up to 6 weeks
- Odorless

Crawl eX (200 ml) = 10 l ready-to-use solution = sufficient for up to 400 m²

Crawl eX (1000 ml) = 50 l ready-to-use solution = sufficient for up to 2000 m²

Cypermethrin

spray distance of up to 3m

Pest control aerosol spray with a great spray distance

FINAL Turbo Spray is a ready-to-use aerosol spray that works almost immediately against flying and crawling insects like cockroaches, ants, silverfish, beetles, mites, spiders, fleas, moths, flies, mosquitoes, wasps and others in the stable, warehouse, household and commercial areas. Due to its special spray mechanism a spray distance of up to 3m can be reached. This facilitates the application also on areas that are hard to reach e.g. ceiling corners, behind and underneath cupboards and in shafts. Do not apply onto the animal.

Permethrin, Tetramethrin, Geraniol, PBO

Listed according to resource list for organic farming in Germany

Organic pest control spray with diatomaceous earth (silicon dioxide)

Ektosol fossil Spray has strong dehydrating properties and works immediately against red mites (*Dermanyssus gallinae*) and other crawling insects like bedbugs, ticks, fleas, ants, silver fishes, woodlice and cockroaches. It is highly effective even in atmospheres of high ambient humidity.

Through the contact with the powder, the protective wax layer of the insects gets damaged and the insects subsequently die of dehydration. It also adheres perfectly onto walls. Due to its physical action, there is no resistance development noted!

Cherry fly trap for cherry fly monitoring

This ready-to-use cherry fly trap is used to monitor cherry flies. Cherry flies lay their eggs into half-ripe cherries (50 to 100 eggs per one cherry fly). The trap attracts the cherry flies and prevents the deposition of eggs into the cherry. So the cherries remain free of worms.

Hang the trap into the branches of the cherry tree. Use 2 to 4 traps for one tree, depending on the size of the tree (1 trap per metre of tree height). The attractant of this trap is an environmentally friendly protein that works immediately after activating it with water.

Time of use: May – June, when the cherries start to turn yellow.

Rat control

The brown rat is the most common rat. The body of this species reaches up to 25 cm and the tail up to 18-21 cm. The body weight varies between 200 to 400 g.

Distribution: basements, storage rooms, livestock stables, barns, landfills, waste disposals, ponds, ditches, rivers and creeks.

Biology and behavior: Brown rats are hierarchically organized and one clan may consist of up to 100 individuals. They use their sense of smell for orientation and for identification of clan members. They are sedentary and defend their territory against invaders. They are intelligent omnivores capable of learning and active especially at night, dusk, and dawn. Brown rats bear 3 to 7 times a year with approx. 4 to 8 pups.

Rat control: Rats may carry diseases, e.g., viral diseases such as foot-and-mouth disease (Aphthae epizooticae), swine fever, rabies, and hantavirus infections; bacterial diseases such as leptospirosis, tuberculosis, salmonellosis, rat-bite fever, lyme disease, and typhus. They may also spread diseases associated with worms, fleas, mite, and fungi. They can compromise food and feed.

Nowadays rat control is carried out by using anticoagulant agents because rats are very intelligent. At first they let taste the food by one member of the clan and wait what happens. Only then, the other animals devour the food. The anticoagulant agent helps to avoid that other members of the clan will get alerted to the danger because it works very slowly. The baits are available in different shapes like cereals, cereal mix with oatmeal, small bags filled with gel, wax blocks and pellets. The choice of the bait depends on local conditions. Cereals and the cereal mix with oatmeal is a very attractive bait, but in moist areas this bait can get moldy. Gel bags, wax blocks and pellets are more resistant to humidity. Gel bags have the advantage to fulfill simultaneously the regular drinking needs of the animals. For an effective and safe rat control the bait should be placed in a baiting station because the animals do not want to be disturbed during the food intake. The dosage of the bait should be 150-200g per one baiting station. The baiting stations should be placed at their trails and regularly refilled, at least once a week.

Rat baiting station for professional use

The **Ratzia Station for Pros** is extremely resilient, weather-proof, lockable, and the ideal choice for placing Ratzia Baits, Ratzia Pellets, and Ratzia Blocks. The box ensures that the baits will not get wet and offers the targets undisturbed and safe intake.

Medicines	3.2%
Increased workload	1.9%
Cost of veterinary treatments	1.7%

- Udder care based on clay with an acidic pH value
- Helps to prevent the sensation of heat
- Forms a protective water resistant film

Eutacid is a viscous, green paste based on clay. This well-tried remedy contains selected herbs that help to prevent the sensation of heat. After application it forms a water resistant film and protects the udder against harmful environmental influences. Regular use of Eutacid after milking keeps the udder in good condition and supports the udder health. Eutacid also can be applied on joints, hooves etc.

- Helps to prevent muscle tension
- Udder care suitable for lactating and dry periods
- Forms a protective film against flies

Eutergel is a green gel based on several herbs. It helps to prevent muscle tension and promotes relaxation. After application it forms a film that protects the udder against flies and harmful environmental influences. Regular use of Eutergel after milking keeps the udder in good condition and supports the udder health.

- Based on Japanese peppermint oil
- Activates the udder and relieves itching
- Cooling effect

Euvital is a green cream based on a high content of Japanese peppermint oil. It helps to activate the udder and relieves itching. Its cooling effect improves the wellbeing and promotes relaxation. Further herbal ingredients moisturize the skin and keep it smooth and gentle. Regular use of Euvital after milking keeps the udder in good condition and supports the udder health.

Euvital System is a special suspension device. It consists of a 2.5 liter bottle Euvital with an extension in form of a teat where the cream can be dosed and squeezed out.

Euvital System is a practical solution especially for large livestock.

Facts of Udder Hygiene

- Beside milking cluster backflush disinfection, teat dipping is the second most important measure

- Mastitis pathogens are permanently present
- The teat canal is still open 90 minutes after milking

Measures

Unless otherwise stated, against every germ basically helps preventively:

- Good, regular barn hygiene
- Milking cluster back-flush
- Teat dipping
- Better conditions for animals (feeding stuff, vitamins)
- Claw disinfection
- Stress prevention
- Stable size
- Races with less "turbo" breeding share

Transference:

From animal to animal

By the environment

By living pathogens on the teat skin

Other pathogens

Transmission:

during the milking

between the milking times

during the dry period

Mastitis control and prophylaxis

Staphylococci (aureus & uberis) *

- Widespread in grass, straw, intestinal bacteria
- Onset in bad condition
- Acute and chronic
- Spreading in milking equipment and environment

Streptococci dyslactactiae *

- Process similar to staphylococci

Coliform pathogen E. Coli, Klebsiella, Serratia marcescens *

- Also occurs as a gut-germ
- Spreading in bad condition

Corynebakterium bovis *

- Occurrence in soil, on skin, in milk, ...
- Part of the normal cow bacterial flora, also in the teat canal
- Spreading in bad conditions
- Can lead to high cells
- „Low pathogen“

Trueperella pyogenes *

- Is mainly spreaded via flies
- Infection usually leads to the loss of an udder quarter
- Germ invades through minor injuries
- May affect organs and blood must be disposed in a professional way
- Insecticides are recommended

Yeasts *

- Transfer in supposed "safe" ways: Splashes of storage bottles of antibiotics that are not disinfected
- Antibiotics are ineffective against yeasts (yeast = fungus)
- Spreading in bad condition and high germ levels

Mykoplasma *

- Extremely small parasitic bacteria
- No cell wall > many antibiotics ineffective
- Need host organism > not cultivable on nutrient media
- In addition to mastitis cause many other forms of inflammation
- Chronic course, not fatal, difficult to treat
- Very vulnerable to disinfectants

Pathogen:

– Staphylococcus (aureus)	*
– Streptococcus dyslactactiae	*
– Staphylococcus (uberis)	*
– Escherichia coli (E. Coli)	*
– Coagulase negative Staphylococci	*
– Corynebakterium bovis	*
– Trueperella pyogenes	*
– Hefen	*
– Mykoplasmen	*

and problem cow!**

Two-component dip solution based on chlorine dioxide

- High content of maintaining ingredients
- Creates a clearly visible and good adhesive, protective film

Dip es oxy-film is one of a two-component dip solution. In order to activate the chlorine dioxide, it is necessary to mix Dip es oxy-film with the second component, the activator, Dip es oxy-active. The resulting solution is used for post-milking teat disinfection and has immediate and long-term disinfecting properties. Selected maintaining ingredients keep the teats soft and healthy. The application has to be carried out by using a dip cup.

Foaming dip solution for teat cleaning before milking

Dip es foam is a foaming cleansing agent containing high-quality conditioners. It is a ready-to-use solution based on lactic acid, used for cleaning the udder before milking. The application has to be carried out by using a foam dip cup. By squeezing the foam dip cup, a solid foam is formed that quickly removes organic contaminations and dip residues before milking.

- Highly economical (approx. 0.4g/teat)
- Does not drip
- Organic acids as preservatives
- Ready-to-use, good visible and solid foam
- Maintains the skin soft and smooth
- Avoids germ propagation

Tested for FMD virus

Kokzi Des®

Stable disinfectant concentrate with a broad spectrum of efficacy
COCCIDIA · CRYPTOSPORIDIA · GIARDIA · ROUNDWORM EGGS · BACTERIA
MYCOBACTERIA (including TB pathogens) · VIRUSES · FUNGI

Advantages of Kokzi Des :

- Reliable control of excreted endoparasites
- Economic advantage due to application concentration of only 3%
- Listed and accepted by the German veterinary society DVG
- Broad spectrum of efficacy
- Low odor
- Only one work step to achieve a thorough disinfection

An endoparasite infestation, especially through coccidia and roundworms, can cause significant economic losses in livestock husbandry. Infected animals excrete coccidia, oocytes etc. with the feces which creates a high risk of infection for other animals.

In case of coccidiosis, like *Isospora suis* (causing piglet diarrhoea), rapid disinfection measures in the stall are required.

In poultry farming *Eimeria tenella* oocysts are widespread and have to be controlled prior setting new animals into the stable.

Please note that endoparasites are able to survive for several months and multiply rapidly and continuously. Only tested products ensure effective control of specific parasites. Kokzi Des has a broad spectrum of efficacy against bacteria, viruses and fungi.

Application chart :

Dosage	Kokzi Des	+ Water	Application rate / Exposure time	
Coccidia	300 ml	10 l = 3.0 %	cleaned surfaces 100 ml/m ²	uncleaned surfaces 400 ml/m ²
Cryptosporidia	200 ml	10 l = 2.0 %		
Clostridia	400 ml	10 l = 4.0 %	exposure time for all pathogens 2 hours	exposure time for all pathogens 2 hours
Bacteria	50 ml	10 l = 0.5 %		
Viruses	300 ml	10 l = 3.0 %		
Fungi (yeasts)	50 ml	10 l = 0.5 %		
Fungi (spores)	150 ml	10 l = 1.5 %		

By combining a powerful disinfectant and administration of medicine, can be assumed, that the infection of other animals by excreted endoparasites can be prevented.

NEW CLEANER PRODUCT LINE

Get to know our new and redesigned products of the new **MASTERWASH Cleaner Line**.

Whatever the intended application, a specialty cleaner is available to get behind that kind of job effectively and efficiently. On sale are cleaners that foam strongly through to not at all, along with various pH levels, to make the product line versatile enough for many different uses.

Basically, the product designation tells you what kind of application the cleaner is meant for. However, the exact MASTERWASH code tells you even more about the product characteristics.

The key should be read as follows:

Masterwash X 00 X

Cleaner Product Line

Masterwash X 00 X

S = strongly foaming | N = weakly or not foaming

pH as in the ready-to-use solution

N = neutral | A = alkaline | S = acid | C = chloro-alkaline

Masterwash N 7 S

Agricultural Cleaner

Neutral foaming cleaner for vehicles and agricultural machines

This cleaner intended both for vehicles and agricultural machinery is a concentrate with excellent detergent properties. It removes oily, fatty, and other pollutions effortlessly. The ready-to-use solution foams and moistens and is suited for both manual washing and high-pressure cleaners. It is an excellent match for tractors, agri-machinery, lorries, and other vehicles and equipment. It's suitable for painted surfaces and plastics.

Usage concentration 2 - 5 %

Packaging	Content	Order No.	EAN-Code
1 Container	10 l	302315	4027693006719

Remark: UN 1760

Masterwash S 3 N

Milking Parlour Cleaner

Combo cleaner to remove fatty and protein residues

This weakly foaming cleaner is intended for the removal of calcic deposits, limescale, and urine scale. Its domains of application include milk rooms and milking parlours, on acid-resistant tiles and seams, stainless steel, glass, and acid-resistant plastics, but also milking clusters, including their rubber parts. Use on aluminium and galvanised objects requires prior testing and may be possible only for a short time. The product is unsuited for chromium-plated fittings.

Usage concentration 1 - 3 %

Packaging	Content	Order No.	EAN-Code
1 Container	10 l	302030	4027693004159

Remark: UN 1805

No-chlorine, no-phosphate alkaline foaming cleaner

- without chlorine
- without phosphates
- hardness-stable
- gentle on materials

Thanks to its low alkalinity, the Foaming Cleaner A is gentler on materials than highly alkaline formulations. It is suitable for almost all plastics, rubbers and polymers commonly used in the food industries.

Usage concentration: 2 - 5 %

Masterwash A 12 S

Foaming Cleaner A

Packaging	Content	Order No.	EAN Code
1 Container	12 kg	310120	4027693004982
Remark: UN 1824			

Acid foaming cleaner building on phosphoric acid

- all-purpose versatility
- ahead of the most tricky pollutions
- with Al inhibitor

The optimum combination of powerful surfactants and emulsifiers allows removing even the most difficult pollutions, such as hardened crusts, deposits, and proteins.

The contained inhibitor reduces wear effects on aluminium.

Usage concentration: 5 - 10 %

Masterwash A 11 S

Power Foam

Highly stable foam ensuring long leave-on exposure

Its targeted formula results in the Power Foam generating a foam of high stability and good adhesive properties. The longer the exposure, the more thorough the removal of pollutions and the more economical the product consumption. It is a very good product for cleaning stables and similar when extremely dirty. Best results are achieved with both foam applicator guns and foam generation systems.

Usage concentration 2 - 5 %

Hoof and claw care balm to promote a healthy horn growth

Hoof-Balm Spray is a ready-to-use hoof care spray for slight and moderate hoof, claw and coronet problems. It is suitable for cattle, sheep, goats, pigs and horses. Regular use helps to prevent fouling and supports a healthy horn growth. Special maintaining ingredients promote the elasticity of the horn substance and nourishing oils make the horn resistant against climatic influences especially in the cold season. Does not cause cracks or hardening of the horn substance. The product is ideal for post-treatment of claw care.

REVITAL SPRAY

Pflegendes Salbenspray (Aerosol)

DE 7♥Pets **REVITAL SPRAY** ist ein mildes Salbenspray zur Anwendung bei Hautveränderungen und Juckreiz bei Kleintieren. Sein elastischer Film schützt die Hautoberfläche vor Erregern und macht trockene Haut wieder geschmeidig. Hervorragend geeignet zur Nachbehandlung von Verletzungen. **Anwendung:** Mit einem Abstand von ca. 10 cm die zu behandelnden Stellen gleichmäßig besprühen und einmassieren.

Nurturing ointment spray (Aerosol)

EN 7♥Pets **REVITAL SPRAY** is a mild ointment spray for use on skin changes and itching for small animals. Its elastic film protects the skin surface against pathogens and makes dry skin smooth again. Ideal for post-treatment of injuries. **Application:** At a distance of about 10 cm evenly spray the areas to be treated and massage in.

Art. No. 310109 200 ml / 6.76 Fl Oz e EAN 4027693003527 € 8,25

PROPHYGRIPPAL

Verbessert das Raumklima und schützt vor Außeneinflüssen

DE 7♥Pets **PROPHYGRIPPAL** wirkt im Sprühverfahren und verbessert das Raumklima. Es neutralisiert mit sofortiger Wirkung unangenehme Gerüche und verströmt einen aromatischen Duft. Hilft vorbeugend und unterstützt körpereigene Abwehrstoffe. **PROPHYGRIPPAL** reduziert die Belastung spürbar mit Erfolg und verbessert so die Umgebungsbedingungen. **Anwendung:** **PROPHYGRIPPAL** nach Bedarf gleichmäßig im Raum nach oben sprühen (Wohnraum, Kleintierbehausungen usw.). In der kälteren Jahreszeit ist eine mehrmalige tägliche Anwendung empfohlen.

Improves the indoor climate and protects against external influences

EN 7♥Pets **PROPHYGRIPPAL** works through spray application and improves the indoor climate. It neutralises unpleasant odours with immediate effect and exudes an aromatic scent. Acts preventively and supports the body's own antibodies. **PROPHYGRIPPAL** noticeably reduces microbial load and improves the interior climate. **Application:** When required, spray **PROPHYGRIPPAL** evenly in the room in an upwards direction (living room, small animal housing, etc.). In the colder months, repeated daily use is recommended.

EKTOSOL SPRAY

Flüssiges Abwehrmittel gegen Parasiten zur Anwendung am Tier

DE 7♥ Pets **EKTOSOL SPRAY** ist ein spezielles Repellentmittel gegen die rote Vogelmilbe, Rüdemilben, Zecken, Federlinge, Haarlinge, Läuse, Flöhe usw. mit Sofort- und Langzeitwirkung. Zur Anwendung bei Hunden, Katzen, Ziervögeln, Rassegeflügel und weiteren Kleintierarten. **EKTOSOL SPRAY** kann hervorragend im Fell und Gefieder von Kleintieren eingesetzt werden. Diese Dose enthält keine Gasfüllung. Dadurch wird das Produkt mit Umgebungstemperatur ausgestoßen, was für Kleintiere sehr angenehm ist. Weiter ist diese Dose in jeder Lage anwendbar. **Anwendung:** Die zu behandelnden Hautpartien am Tier gezielt besprühen. 1 Sek. sprühen (≈ 1,5 ml) pro zu behandelnde Fläche von ca. 10 x 10 cm aus einem Abstand von 10 cm. Hauptsächlich können Ohrfalten, Hals, Schwanzansatz, Schenkel sowie der Rücken befallen sein. Bei Erstanwendung alle 2-3 Tage, nach ca. 1 Woche dann im 14 Tage Rhythmus zur Vorbeugung. Die Wirkung tritt unmittelbar ein.

Liquid repellent against parasites for use on animals

EN 7♥ Pets **EKTOSOL SPRAY** is a special repellent agent against the red bird mites, burdock mites, ticks, bird lice, biting lice, lice, fleas etc. with immediate and long-term effect. For use on dogs, cats, pet birds, breed poultry and other small species. **EKTOSOL SPRAY** can be used excellently in the coat and plumage of small animals. This can contains no gas. Therefore, the product is sprayed with ambient temperature, which is very pleasant for small animals. Further, this can is applicable in any position. **Application:** Spray the affected skin areas specifically. Spray 1 sec. (≈ 1,5 ml) per 10 x 10 cm skin area with a distance of 10 cm. Mainly, the folds of the ear, the throat, the tail, the thigh and the back may be affected. When used for the first time, treat every 2-3 days, after approx. 1 week in a 14 days rhythm for prevention. The effect occurs immediately.

HAUSTAUBMILBEN SPRAY

Sprühlösung gegen Hausstaubmilben mit pflanzlichen Wirkstoffen bei Hausstaub-Allergie

DE 7 ♥ Pets **HAUSTAUBMILBEN SPRAY** schützt zuverlässig für mindestens 6 Monate vor Hausstaubmilben. Der rein pflanzliche Margosa-Extrakt Mahalin wird in einem patentierten Spezialverfahren aus den Samen des indischen Niembaumes gewonnen. Die Inhaltsstoffe des Mahalin-Extrakts wehren die Milben ab und machen ihre Nahrung (Hautschuppen) ungenießbar. Der Mangel an wichtigen Nahrungsbestandteilen führt zu einer gestörten Vermehrung und letztendlich zum Verhungern der Milben. Im Ergebnis wird die allergene Belastung deutlich reduziert.

Spray solution against dust mites with plant-based active ingredients for house dust allergy

EN 7 ♥ Pets **HAUSTAUBMILBEN SPRAY** reliably protects from house dust mites for at least 6 months. The purely herbal Margosa extract Mahalin is extracted in a special, patented process from the seeds of the Indian lilac. The ingredients of the Mahalin extract repel the mites and make their food (skin dandruff) inedible. The lack of important food ingredients leads to a disturbed propagation and ultimately the starvation of the mites. As a result, the allergens load is significantly reduced.

Precaution and Safety

Hazard and Precautionary Statements for Handling Biocides

Manufacturers include an appropriate paragraph on the risk and safety precautions on the label, as provided for by the law, to alert users to the hazards associated with handling biocides.

The user is required to conform closely with these precautions as a means to protect him- or herself and the immediate surroundings.

Whenever using pesticides, wearing protective clothes, safety goggles, and gloves is recommended.

Below the hazard statements and precautions are given with their official numbers.

H200 Unstable explosives	P101 If medical advice is needed, have product container or label at hand
H201 Explosive; mass explosion hazard	P102 Keep out of reach of children
H202 Explosive severe projection hazard	P103 Read label before use
H203 Explosive; fire, blast or projection hazard	P201 Obtain special instructions before use
H204 Fire or projection hazard	P202 Do not handle until all safety precautions have been read and understood
H205 May mass explode in fire	P210 Keep away from heat/sparks/open flames/hot surfaces – No smoking
H220 Extremely flammable gas	P211 Do not spray on an open flame or other ignition source
H221 Flammable gas	P220 Keep/Store away from clothing/.../combustible materials
H222 Extremely flammable aerosol	P221 Take any precaution to avoid mixing with combustibles
H223 Flammable aerosol	P222 Do not allow contact with air
H224 Extremely flammable liquid and vapour	P223 Keep away from any possible contact with water, because of violent reaction and possible flash fire
H225 Highly flammable liquid and vapour	P230 Keep wetted with ...
H226 Flammable liquid and vapour	P231 Handle under inert gas
H227 Combustible liquid	P232 Protect from moisture
H228 Flammable solid	P233 Keep Container tightly closed
H229 Pressurized Container: may burst if heated	P234 Keep only in original Container
H230 May react explosively even in the absence of air	P235 Keep cool
H231 May react explosively even in the absence of air at elevated pressure and/or temperature	P240 Ground/bond container and receiving equipment
H240 Heating may cause an explosion	P241 Use explosion-proof electrical/ventilating/light/.../equipment
H241 Heating may cause a fire or explosion	P242 Use only non-sparking tools
H242 Heating may cause a fire	P243 Take precautionary measures against static discharge
H250 Catches fire spontaneously if exposed to air	P244 Keep reduction valves free from grease and oil
H251 Self-heating; may catch fire	P250 Do not subject to grinding/shock/.../friction
H252 Self-heating in large quantities; may catch fire	P251 Pressurized container – Do not pierce or burn, even after use
H260 In contact with water releases flammable gases which may ignite spontaneously	P260 Do not breathe dust/fume/gas/mist/vapours/spray
H261 In contact with water releases flammable gas	P261 Avoid breathing dust/fume/gas/mist/vapours/spray
H270 May cause or intensify fire; oxidizer	P262 Do not get in eyes, on skin, or on clothing
H271 May cause fire or explosion; strong oxidizer	P263 Avoid contact during pregnancy/while nursing
H272 May intensify fire; oxidizer	P264 Wash ... thoroughly after handling
H280 Contains gas under pressure; may explode if heated	P270 Do not eat, drink or smoke when using this product
H281 Contains refrigerated gas; may cause cryogenic burns or injury	P271 Use only outdoors or in a well-ventilated area
H290 May be corrosive to metals	P272 Contaminated work clothing should not be allowed out of the workplace
H300 Fatal if swallowed	P273 Avoid release to the environment
H301 Toxic if swallowed	P280 Wear protective gloves/protective clothing/eye protection/face protection
H302 Harmful if swallowed	P281 Use personal protective equipment as required
H303 May be harmful if swallowed	P282 Wear cold insulating gloves/face shield/eye protection
H304 May be fatal if swallowed and enters airways	P283 Wear fire/flamm resistant/retardant clothing
H305 May be harmful if swallowed and enters airways	P284 Wear respiratory protection
H310 Fatal in contact with skin	P231+232 Handle under inert gas. Protect from moisture
H311 Toxic in contact with skin	P235+410 Keep cool. Protect from sunlight
H312 Harmful in contact with skin	P301 IF SWALLOWED:
H313 May be harmful in contact with skin	P302 IF ON SKIN:
H314 Causes severe skin burns and eye damage	P303 IF ON SKIN (or hair):
H315 Causes skin irritation	P304 IF INHALED:
H316 Causes mild skin irritation	P305 IF IN EYES:
H317 May cause an allergic skin reaction	P306 IF ON CLOTHING:
H318 Causes serious eye damage	P307 IF exposed:
H319 Causes serious eye irritation	P308 IF exposed or concerned:
H320 Causes eye irritation	P309 IF exposed or you feel unwell:
H330 Fatal if inhaled	P310 Immediately call a POISON CENTER or doctor/physician
H331 Toxic if inhaled	P311 Call a POISON CENTER or doctor/physician
H332 Harmful if inhaled	P312 Call a POISON CENTER or doctor/physician if you feel unwell
H333 May be harmful if inhaled	P313 Get medical advice/attention
H334 May cause allergy or asthma symptoms or breathing difficulties if inhaled	P314 Get Medical advice/attention if you feel unwell
H335 May cause respiratory irritation	P315 Get immediate medical advice/attention
H336 May cause drowsiness or dizziness	P320 Specific treatment is urgent (see ... on this label)
H340 May cause genetic defects (details on way of exposure if conclusively shown that hazard not associated with any other way of exposure)	P321 Specific treatment (see ... on this label)
H341 Suspected of causing genetic defects (details on way of exposure if conclusively shown that hazard not associated with any other way of exposure)	P322 Specific measures (see ... on this label)
H350 May cause cancer (details on way of exposure if conclusively shown that hazard not associated with any other way of exposure)	P330 Rinse mouth
H351 Suspected of causing cancer (details on way of exposure if conclusively shown that hazard not associated with any other way of exposure)	P331 Do NOT induce vomiting
H360 May damage fertility or the unborn child (if known, details on effect) (details on way of exposure if conclusively shown that hazard not associated with any other way of exposure)	P332 If skin irritation occurs:
H361 Suspected of damaging fertility or the unborn child (if known, details on effect) (details on way of exposure if conclusively shown that hazard not associated with any other way of exposure)	P333 If skin irritation or a rash occurs:
H362 May cause harm to breast-fed children	P334 Immerse in cool water/wrap in wet bandages
H370 Causes damage to organs (or indication of all relevant organs if known) (details on way of exposure if conclusively shown that hazard not associated with any other way of exposure)	P335 Brush off loose particles from skin
H371 May cause damage to organs (or indication of all relevant organs if known) (details on way of exposure if conclusively shown that hazard not associated with any other way of exposure)	P336 Thaw frosted parts with lukewarm water. Do not rub affected areas
	P337 If eye irritation persists:
	P338 Remove contact lenses if present and easy to do. Continue rinsing
	P340 Remove victim to fresh air and keep at rest in a position comfortable for breathing
	P341 If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing
	P342 If experiencing respiratory symptoms:
	P350 Gently wash with plenty of soap and water
	P351 Rinse cautiously with water for several minutes
	P352 Wash with soap and water
	P353 Rinse skin with water/shower

General Terms and Conditions

1. Offers

Prices quoted in offers are deemed agreed only when confirmed at order. All prices are given exclusive of value added tax. Where delivery is free of charge, the relevant minimum quantities apply. Within Germany, we offer free delivery for orders above 300.00 euros. Orders shall be considered as having been accepted only when confirmed in writing or when invoiced. Special arrangements shall apply only if duly confirmed in writing. Prices applicable on the date of delivery shall be charged. For export shipments the ex-works price shall be valid, unless expressly specified and agreed otherwise in writing.

2. Delivery Policy

We reserve the right to partial delivery. No warranty shall be assumed for any specified delivery date. In the event of delayed delivery, the customer shall not be entitled to claim damages. Disruptions of operation and traffic, action by the authorities and cases of force majeure, as well as any other circumstances which directly or indirectly make manufacturing or delivery impossible for us or our suppliers, shall discharge us from the obligation to deliver for the duration of the disruptions so caused, or entitle us to cancel the agreement, in whole or in part, the buyer not being entitled to claim any damages.

3. Dispatch and Forwarding

The goods shall on principle be transported at the buyer's expense and at the buyer's risk. Only such quantities, weights or number of items as determined by us before forwarding the goods shall form the basis of our invoice. The buyer shall undertake to handle any possible damage to the goods in transit directly with the carrier.

4. Term of Payment

The term of payment is 30 (thirty) days net from the date of invoice. The date of receipt of payment shall be decisive. Cheques shall be valid only when credited. Should the term of payment be exceeded, we shall be entitled to charge interest on overdue payments at normal bank rates. In the event of payment default all unpaid invoices shall become due immediately. Should there be any doubts regarding the buyer's solvency, we shall be entitled to request prepayment or securities. Should the buyer be in arrears with any obligation whatsoever, without prejudice to other claims, we shall be entitled to put delivery on hold. For deliveries to as yet unknown customers, we on principle reserve the right to deliver subject to prepayment or cash on delivery.

5. Liability

Any information on the possible ways of processing and applying the products, including on hazards associated with them, if any, are

provided on account of the current state of our knowledge yet without guarantee and denying any liability. Upon forwarding the goods from our premises, all liabilities resulting from said products, regardless of their degree of hazard, shall be transferred to the buyer.

6. Notice of Defects, Complaints

Complaints of whatever nature regarding faults or defects shall be taken into account only if such complaint is submitted to us in writing within 10 (ten) days of the receipt of the goods by the buyer, so as to enable us to assess the justification of the complaint. Factually substantiated and correctly notified defects shall be remedied, at our discretion, by a discount on the purchase price, replacement, or return of the faulty good against reimbursement of the purchase price. Goods may be returned only with our prior, written agreement. Claims beyond said provisions shall be excluded. All information is given with the reservation of typos.

7. Retention of Title

Delivery of goods shall on principle be made with retention of title to such goods. Ownership of the goods shall be transferred to the buyer only when the buyer has paid all liabilities resulting from our delivery, irrespective of whether or not the purchase price for the delivery of certain goods specifically denominated was paid by the buyer. In the case of current accounts, any reserved property shall be regarded as security for our claim for the entire balance due to us. The buyer shall immediately inform us by registered mail of any pledge or transfer of securities to third parties. Said provisions do not prevent the buyer from selling the delivered goods in the ordinary course of business. However, such right to sell shall fall into abeyance if the buyer is in default of payment or if the buyer experiences a substantial deterioration of economic status. Should the buyer's business be sold or leased to third parties, the buyer shall immediately give us notice of such change.

8. Place of Jurisdiction

Rosenheim shall be the place of performance and jurisdiction for court proceedings in relation to orders to pay debt, as well as for business transactions with fully registered businesses.

9. Deliveries Abroad

All the above conditions shall on principle apply for export deliveries. In particular, German law shall be deemed having been elected. The buyer hereby undertakes, at the outset, to pay all costs and resultant interest thereon in each and every delay. Any deviation from these conditions shall require confirmation in writing.
